## What you will learn:

Teaching effectively with technology is an essential competency for all educators. ISTE's Summer Learning Academy 2020 will take you beyond a simple understanding of how tools work to ensure that you have the foundational knowledge and confidence to implement evidence-based practices in blended and digital learning environments.

## Key topics addressed through the program include:

- **Access:** Building awareness of resources and strategies to narrow the digital equity divide
- **Collaboration:** Creating classroom community that fosters collaboration and creativity
- **Equity:** Exploring explicit strategies to meet the needs of all learners
- **Digital Citizenship:** Teaching and modeling digital citizenship to help students be responsible and active in online communities
- **Formative Assessment:** Providing meaningful feedback and assessment
- **Learning Design:** Developing lessons that empower learners and foster student agency
- **Social Emotional Learning:** Understanding strategies to sustain relationships and integrate SEL in online learning
- **Universal Design for Learning:** Implementing a framework for designing instruction that meets the needs of every learner

While these topics are helpful to teachers shifting to remote learning, the content is designed to be useful for teaching in both blended and online learning settings.
